Flocculator arrangement at the Kolar water works

Continuation Sheet ML File No 72 Current No of 42 Page 1

From

The D.C. Kolar Dist

No B5-C 106/42-43 dt 23 3 43

Pds for orders an estimate for Rs 2100 for the continuance of the Flocculator arrangement at the Kolar Waterworks during the current year, the cost being met out of the Municipal funds

2) It is seen from the ML Collection 72-42 placed below that the cost of continuance of the Flocculator arrangement, which is intended for removing the turbidity of water was originally proposed to be met out of the provision for the improvement of water supply in the mid budget for the current year. The present resolution dt 27 2 43 of the mid Council is to meet the cost from the closing balance

3) The proposal is to continue this temporary arrangement, which has been yielding good results, on a permanent basis, the cost being borne by the Kolar Town Municipality

4) Subd for orders if the Dir of PH may be consulted as in the matter in the first instance

5) This is in accordance with the Rly 36/3 estimate prepared by the Sanitary Engineer

It may be approved, as the estimate has been countersigned by the President, Kolar Town Municipality

Subject Water Supply in Kolar Town

I have the honour to invite your kind reference to my letter No HC 66/42-43 dated 19th November 1942 regarding the Subsidiary Pumping Arrangements, to be made at Ammerahally Tank, and to state as follows -

On your kind recommendation the Government were pleased to sanction a sum of Rs 3340/- in their order No I 8778-91/M 1-103-42-5 dated 2-3-43, being the entire cost of the proposed works, The Sanitary Engineer who had been requested by me to kindly start the work in anticipation of sanction, had completed the work for installing a pump set and improving the well in the Ammerahally tank bed

The water supply from the tank completely failed us by the middle of January 43 and Subsidiary Pumping operations commenced from 14-1-43 and are in progress even now The normal water-supply for this town is about 1,80,000 gallons Due to the complete failure of the regular expected rains last year, it was proposed by the Sanitary Engineer when both of us inspected the water work in November 42 to reduce the water supply to 1,10,000 gallons so as to conserv the supply Accordingly, the supply to this town was reduced, and on further considerations in February 43, it was reduced to 80,000 gallons This continued till 19-3-43 when on inspection of the tank along with the Superintendent K G F Water Works, I found the situation quite alarming in as much as the yeild from the well was not up to expectations The joint inspection note in which some definite proposals were made by me to tide over the situation have been separately submitted to you with this office No 257 dated 20th March 43

The following is the action taken by me and the subject will be placed at the meeting of the Municipal Council on 26-3-43 for their opinion

1) The yield from the well in the tank bed is very poor being barely 600 gallons per hour It was felt that if the well was deepened by 3 or 4 feet, the yield might improve The Superintendent, K G F Water Works very kindly agreed to the proposal and the work is already in progress He intimated me yesterday that there was a definite improovement the yield going up to 1500 gallons per hour

2) The Water supply to this town has been further cut down to 65,000 gallons per day and it has been proposed to supply 35,000 gallons to the town in the morning and 30,000 gallons in the evening The water supply to the different parts of the town will be regulated by the Sanitary Inspector with the aid of the two Turnkeys now functioning, and if necessary special establishment will be employed after obtaining sanction of the council

3) The public of Kolar town have been repeatedly informed about the scarcity of the water supply and requested to dig up new wells and clean up the existing wells and to utilise the water-supply available from the pumping station solely for drinking purposes

4) I inspected all the Public Wells in the town along with the Superintendent on 21-3-43 A list of all such wells has been prepared, numbered and classified according to the quality of water available - whether potable or not All the drinking water wells have been cleaned and chlorinated Arrangements have been made to chlorinate them systematically once a week A list of all the private wells in the town is also under compilation, and the Superintendent advised that they should also be cleaned and chlorinated periodically

5) There are two important and big drinking water wells in this town whose capacity is about 40,000 gallons each They are i) a well in the Ammanakere tank bed ii) Srikanteswara Iyer's well near Dasarathaki nte Arrangements have been made to instal a 5 H P pumping set for the first well to be worked by means of electrical power The main water pipe line in the fort area will be connected to this well and it is expected that the whole of that area will be fed by this arrangement

The Superintendent, Power and lighting, K G F was personally requested ~~to~~ by me to run a temporary line for installing the aforesaid pump and he has kindly pushed ahead with the work in anticipation of sanction of the estimate which may work up to about Rs 250/-

p t o

6) The Superintendent ha also been requested to test the a yield from Srikanteswara Iyer's well by means of an ie oil pump and shou it prove successful it has been proposed to utilise the water by joining it on to the water mains in that area

7) It was also proposed to utilise water from the borewell in the Narasimharajendra Hospital Compound The yield from the borewell has been estimated to be at least 20,000 gallons per day. All the same, connection has bee given from the borewell to the water main in the extension and it has been proposed to utilise the water from the bore well for washing and other purposes only

8) It has been ascertained that water from the Dasaratha kunte was being utilised for drinking purposes formerly, but it has now fallen into disuse, the people using it for purposes of washing clothes etc The Superintendent intimates me that the Director of Public Health has desired that the water there may be kept free from further contamination and tested by a chemist as to its quality It appears that th e has expressed the opinion that the same could be used for drinking purposes if found fit, after elaborate and careful decontamination by addition of alum, chlorine etc , Action is being taken on the lines suggested by the Director of Public Health, and the Superintendent of K G F Water works

A detailed estimate of expenditure that might be incurred in this connection will be placed before the council, their sanction obtained and same submitted to you in due course In the meanwhile however action is being taken as expeditiously as possible to tide over the situation that has arisen Mr K V Siddabasaiah, the Superintendent, K G F water works is camping at Kolar from the last four days and has been of invaluable help both in the matter of giving new suggestions and in executing all the special schemes with a rapidity that is commensurate with th e urgency of the situation
